

What is Ipamorelin Acetate?

Ipamorelin Acetate is a Growth Hormone Releasing Peptide (GHRP) that stimulates the pituitary gland within the body to release natural growth hormone (GH). Ipamorelin Acetate is a pentapeptide composed of five amino acids and has a biological half-life of 2 hours after administration. It is widely known for being able to suppress somatostatin or growth inhibiting hormone.

As we age, our hormone levels fluctuate interfering with patient's overall quality of life. Imbalances can result in loss of energy, increased irritability, sleeplessness, memory problems, and low sex drive. Utilizing peptide therapy separately or in conjunction with hormone replacement may restore optimal hormone levels in your patients. Studies suggest that Ipamorelin Acetate did not affect FSH, LH, Prolactin, or TSH levels. Furthermore, Ipamorelin did not seem to have an impact on cortisol and ACTH levels during GHRH stimulation.

Patient Benefits Over Time May Include:

- Aid in the body's ability to burn fat
- Helps improve lean muscle mass
- Supports immune system
- Improved sex drive
- Strengthened cardiovascular system
- Improved quality of sleep
- Improved energy and endurance
- Supports bone density
- Improved skin firmness and moisture retention
- Improved cognition and memory

What Strengths & Forms Are Available?

Reach out to your Account Representative today to get more information on Ipamorelin or to place an order. If you don't know who to contact, call 800.622.4510, or email info@wellsrx.com

Formulation	Dosage Form
Available February 1st 2018	
Ipamorelin 9mg	Lyophilized Kit*
Ipamorelin/Theanine 9mg/75mg	Lyophilized Kit*
Coming Spring 2018	
Ipamorelin/Sermorelin 9mg/9mg	Lyophilized Kit*
Ipamorelin/Sermorelin 15mg/15mg	Lyophilized Kit*

*Kit Includes: vial of medication, vial of diluent, and mixing supplies
